

# INVITA

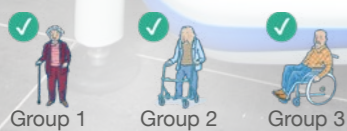

Tilting bath that combines showering and bathing

## Smart combination solution in a compact design.

The INVITA sitting and shower bath tub offers a unique concept for a combination of bathing and safe showering. On the one hand, an unsurpassed, ergonomic sitting position prevents the resident from sliding off while showering, and on the other hand, by swiveling the bath back, the resident has the opportunity to take a pleasant full bath.

The tub promotes independence and, through the possibility of self-entry into the tub, promotes the dignity of the resident. The side handles support safe entry and the horizontal foot area also provides the necessary support. Patient lifts can also be used for transfer to the tub.

Large handles for secure self entry and exit

Compact design, the tub takes up little space

Remote control for simple tilt adjustment

Quick tub drainage

Optional: Air-Relax system with circulation-promoting massage effect

Seat with extra large hygiene opening

Absolutely safe sitting and lying position with no risk of slipping

Generous upper body area for enough space when showering

The stepless, electrical tilt function brings the resident into a bathing position

## Ideal for small room concepts

The compact shape of the INVITA offers you to be able to bath and shower your residents, even in limited spaces.

## Unique combination of showering and bathing

The secure seat offers ideal shower conditions for caregivers and residents because it prevents the resident from slipping. At the same time, swiveling the tub back offers the possibility to take a pleasant full bath.

## Possibility of safe self-entry

The horizontal foot area with non-slip covering and the large handles on the side of the tub enable residents to safely get into the care tub by themselves. The associated feeling of independency and control of your own mobility, promotes the well-being of your residents immensely and offers a dignified approach to care.
