ABOUT FUNKE MEDICAL GMBH

Company information

Funke Medical GmbH – since 1988

The Funke Medical GmbH is a German company, which manufactures high quality medical systems for seating, lying and positioning of patients. The production takes place at three locations with a production area of 17.800m² in Raesfeld, in North Rhine-Westphalia. The products are manufactured exclusively in Germany.

The Funke Medical GmbH is the market leader in the field of decubitus prophylaxis and therapy for homecare in Germany. It is an international operating company, which already has long-standing business relationships with over 1.400 customers from the medical trade and clinics within Germany and abroad.

Would you like to find out more about our company and our product range? No problem! Whether by e-mail, by telephone or in person- the employees of Funke Medical GmbH are of course always at your disposal.

Further information and news at funke-medical.de!

We look forward to hearing from you soon!

Environmental responsibility

Environmental and climate protection are very important to us. For this reason, we attach great importance to resource-saving processes in order to keep our ecological footprint as small as possible. To become more sustainable, we have taken the following measures:

Photovoltaic

Since 2012, we generate 250.000 kWh of electricity from solar energy using 4 photovoltaic systems. The produced amount covers about 65% of our own demand. This means that approx. 130 tons less CO₂ will be emitted into the environment every year.

Climate-friendly mattresses

Our **GREENLINE**® mattresses are made of **ECOLAST**® foam. Compared to conventional decubitus therapy mattresses (*standard foam mattresses or alternating pressure mattresses*) they have approx. 22%* less CO₂ emission.

Sustainable packaging

Our seat cushion cartons/HEEL PROTECT® cartons are made of grass paper. This is a fast-growing, sustainable raw material. The grass used for production comes from previously unused green areas, so-called compensatory areas. They are also only mown once at the beginning and once at the end of the year, so that the main vegetation periods of the grasses are not affected.

Water saving:

During the production of grass paper, significantly less water is required than for virgin wood pulp or the processing of recycled paper.

CO₂ saving:

Grass paper produces significantly lower CO₂ emissions than virgin wood pulp.

Resource-saving:

Minimising the consumption of important resources such as wood.

Biodegradable:

Grass paper consists of natural fibres, which are biodegradable. The flexo inks used are water-soluble, ecologically sound and can be recycled with the cardboard.

Saving of plastic

The seat cushions and HEEL PROTECT® are also provided with a fresh seal instead of an additional film. In this way we save 6 tons of foil per year.

We want to preserve our natural resources with all these measures in order to live up to our environmental responsibility.

THE WORLD IS A FINE PLACE
AND WORTH FIGHTING FOR.

Certifications

With the certification according to DIN EN ISO 13485 the Funke Medical GmbH is authorized to manufacture medical products and to sell them in accordance with relevant legislation. These quality management systems are constantly checked and recertified by certification bodies and public authorities. As a result, the company is constantly developing.

Internal, the quality is ensured by a quality management officer, a safety officer and a qualified person in accordance with MDR 2017/745.

The Funke Medical GmbH is distinguished by its outstanding medical competence, continuous high quality and reliable delivery capability.

Certified quality management system according to DIN EN ISO 13485

Certified manufacturer of CE-marked medical devices according to MDR 2017/745

Clinical evaluation according to MEDDEV 2.7.1

Traceability of all products with the help of the UDI-Code

Laboratory studies: microclimate, pressure relief, flameretardancy, biocompatibility

1 kg foam = 3 kg CO₂

Conventional
foam mattresses

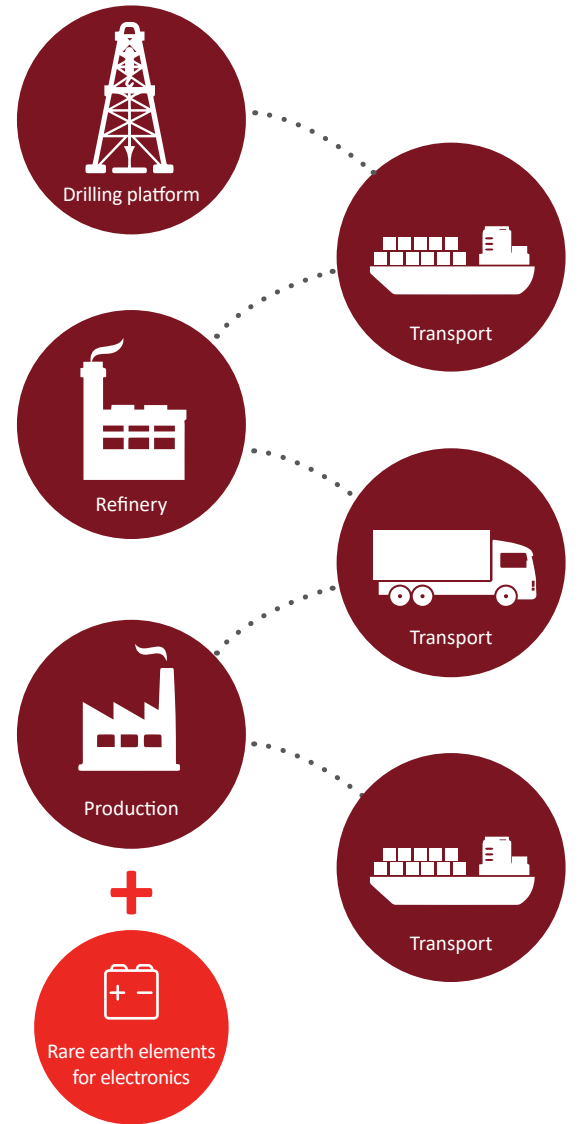

11 kg foam
= 33 kg CO₂

— GREENLINE[©] —

8,6 kg foam
= 25,8 kg CO₂

Alternating pressure mattresses

1 kg plastic = 3,5 kg CO₂

10 kg plastic
= 35 kg CO₂
+ rare earth elements
+ permanent energy consumption

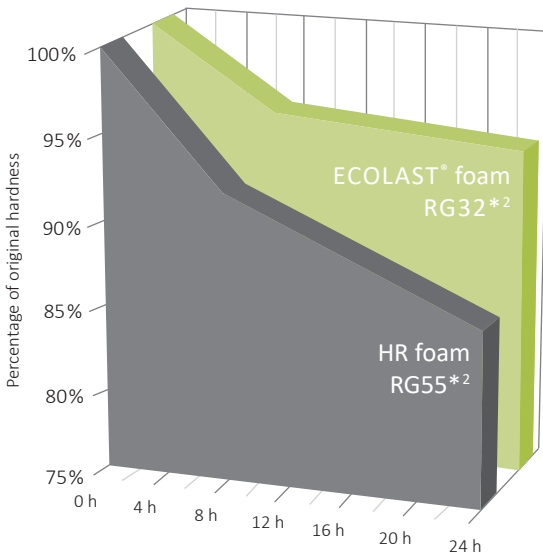

ECOLAST[®] – Technical Advantages

GREENLINE[®] mattresses are made of ECOLAST[®] foam. Compared to conventional decubitus therapy mattresses (standard foam mattresses or alternating pressure mattresses) they have less CO₂ emission.

ECOLAST[®] foam is a specially developed hybrid foam. Compared to standard foam, the more open-cell structure ensures improved air circulation, so that the patient benefits from an optimal microclimate.

ECOLAST[®] foam offers perfect pressure relief and an improved durability.

(e.g. clinics, elderly homes)

Resource saving (money and workforce)!

Decubitus therapy mattresses with evacuation function

All mattresses in this range are equipped with an evacuation function. This means that you can evacuate patients quickly and easily without transferring them on rescue sheets or carry them on stretchers!

Evacuation systems such as stretchers and rescue sheets often require 2 or more persons to use them.

The EVAQ® decubitus therapy mattresses enable you to carry out evacuation gently using only one person, even via stairs!

§§ Quite apart from the fact that every facility operator is responsible for taking measures to ensure rapid evacuation! §§

SAFER → FASTER → GENTLER

- Safety belts with quick-release buckle
- Special sliding material at the bottom
- Stairway evacuation possible
- Firm edges provide stability
- Rescue handles on the cover

- AIR-CELL SEAT CUSHION -
For active wheelchair users!

WATCH NOW
on YouTube!

Handle for easy carrying

Soft protective cover with
hook-and-loop fastener

1

Lift the protective cover.

2

Open the valve by pulling the blue
lock and wait approx. 30 seconds,
until the air-cells have inflated
automatically.
(Valve lock can not fall off.)

3

Close the valve
by pressing.

4

Put the cushion on the wheelchair or seat.

*(The handle must point to the front and the
attached arrows must point upwards.)*

Sit on the cushion.

5

Carefully open the valve again
until the ideal sitting comfort
is achieved.

6

Close the valve and
the protective cover.

- AIR-CELL SEAT CUSHION -
For active wheelchair users!

3-chamber seat cushion provides optimum pressure relief

Individually adjustable for ideal seating comfort

No pump or other tools necessary

Fast and easy adaptation to external pressure conditions

No risk of failure due to self-inflating FOAM-IN-CELL-TECHNOLOGY

Very light – 70 % less weight than conventional air-cell seat cushions

POSIMED®

Positioning pillows

POSIMED® pillows are positioning aids in many different shapes and sizes for pressure sore prevention and treatment support.

With the various positioning aids the patient can be moved marginally and the well-balanced pressure distribution enables the patient to lie in a relaxed and pressure-relieving position. The aim is to keep the duration and the intensity of pressure to a minimum. Our positioning system is based on a pressure-relieving and malleable ball-shaped filling.

With the MobiTurn® positioning/turning aid, people being cared for can be turned safely and painlessly from the supine to the side position in bed. The transfer by the caregiver is simplified and thus enables back-friendly and energy-saving work.

1.

The person being cared for lies flat in bed in the supine position. Please make sure that the person being cared for is not too close to the edge of the bed towards which they are to be turned. This prevents the person from falling out when being turned.

2.

The legs of the person being cared for are lifted by the care giver and the MobiTurn® is placed flat under the legs.

3.

The legs of the person being cared for need to be placed straight in the recesses of the MobiTurn® positioning/turning aid.

4.

In the next step, the MobiTurn® is straightened up and should be at the knees of the person to be cared for.

5. Now the person to be cared for is prepared for turning. The arm facing away from the desired direction of positioning is placed on the abdomen of the person to be cared for. The other arm, which is on the side of the bed, is placed upside at a 90° angle.

6. The carer places one hand on the MobiTurn® and the other hand on the shoulder of the person to be cared for in order to turn him into the side position as gently as possible.

7. The patient is now in the lateral position and needs to be stabilized. Afterwards the MobiTurn® positioning/turning aid can be removed.

If the patient needs to be treated in the lateral position for a short time, the MobiTurn® is not removed until the patient has been returned to the supine position after the treatment.

8. To return the patient to the supine position, the carer places one hand on the MobiTurn® at the hollow of the knee and the other hand on the shoulder of the patient and turns them back onto their back.

To remove the MobiTurn®, it is tilted towards the end of the bed until it lies flat on the mattress. The legs of the person being cared for are lifted and the MobiTurn® can easily be removed.
